

ENCEPP AND RESEARCH THAT SUPPORTS HTA

HTA WORKING GROUP SURVEY REPORT

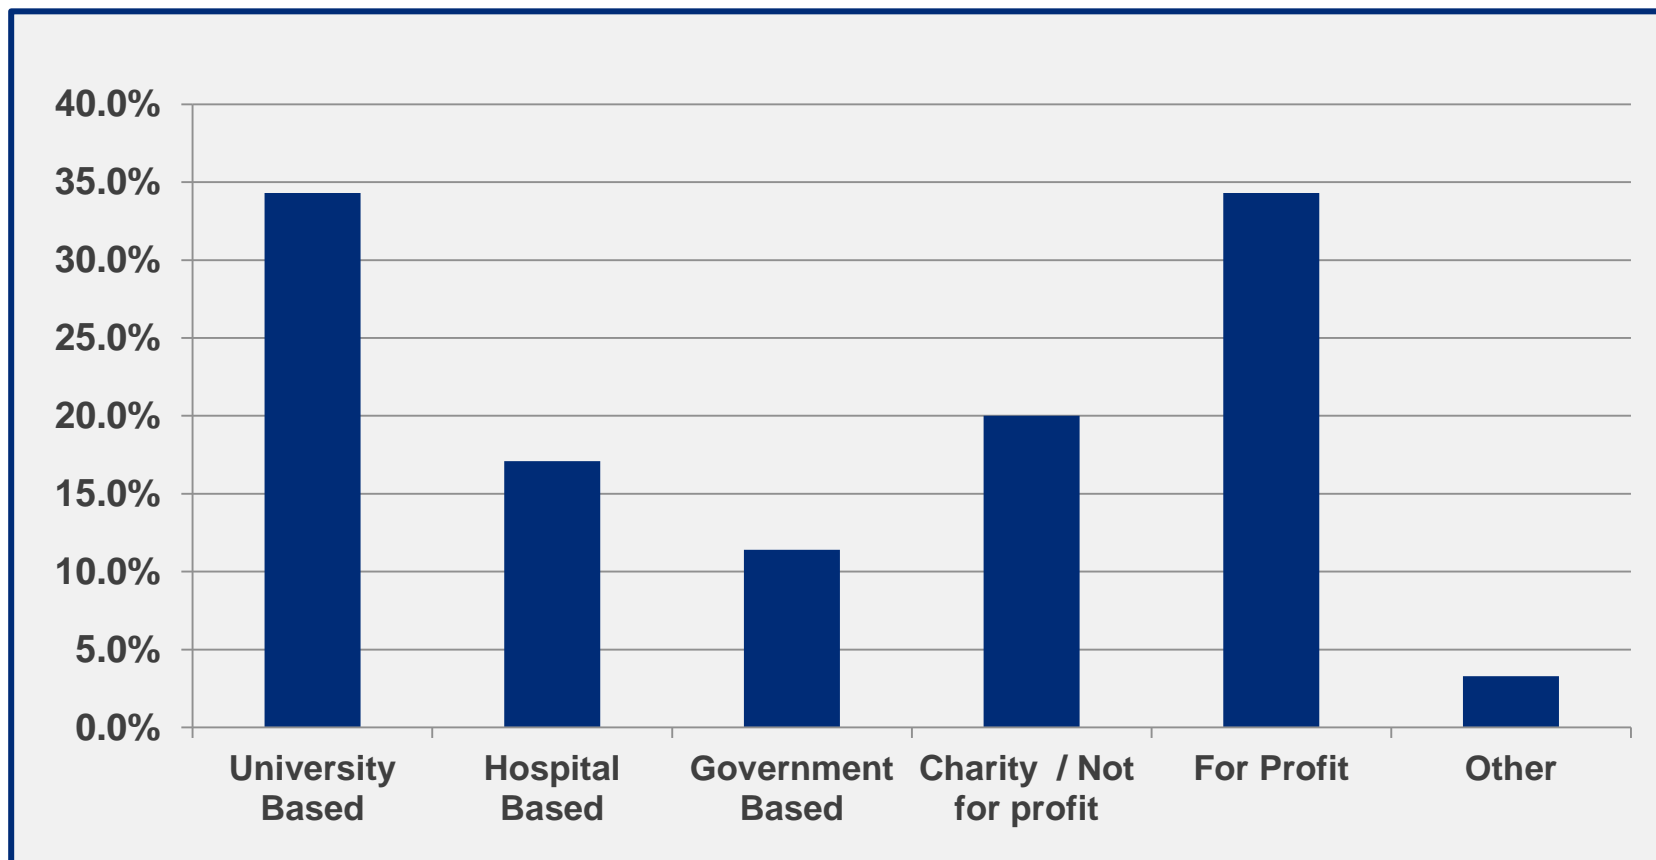

Dr Yvonne Lis

BACKGROUND

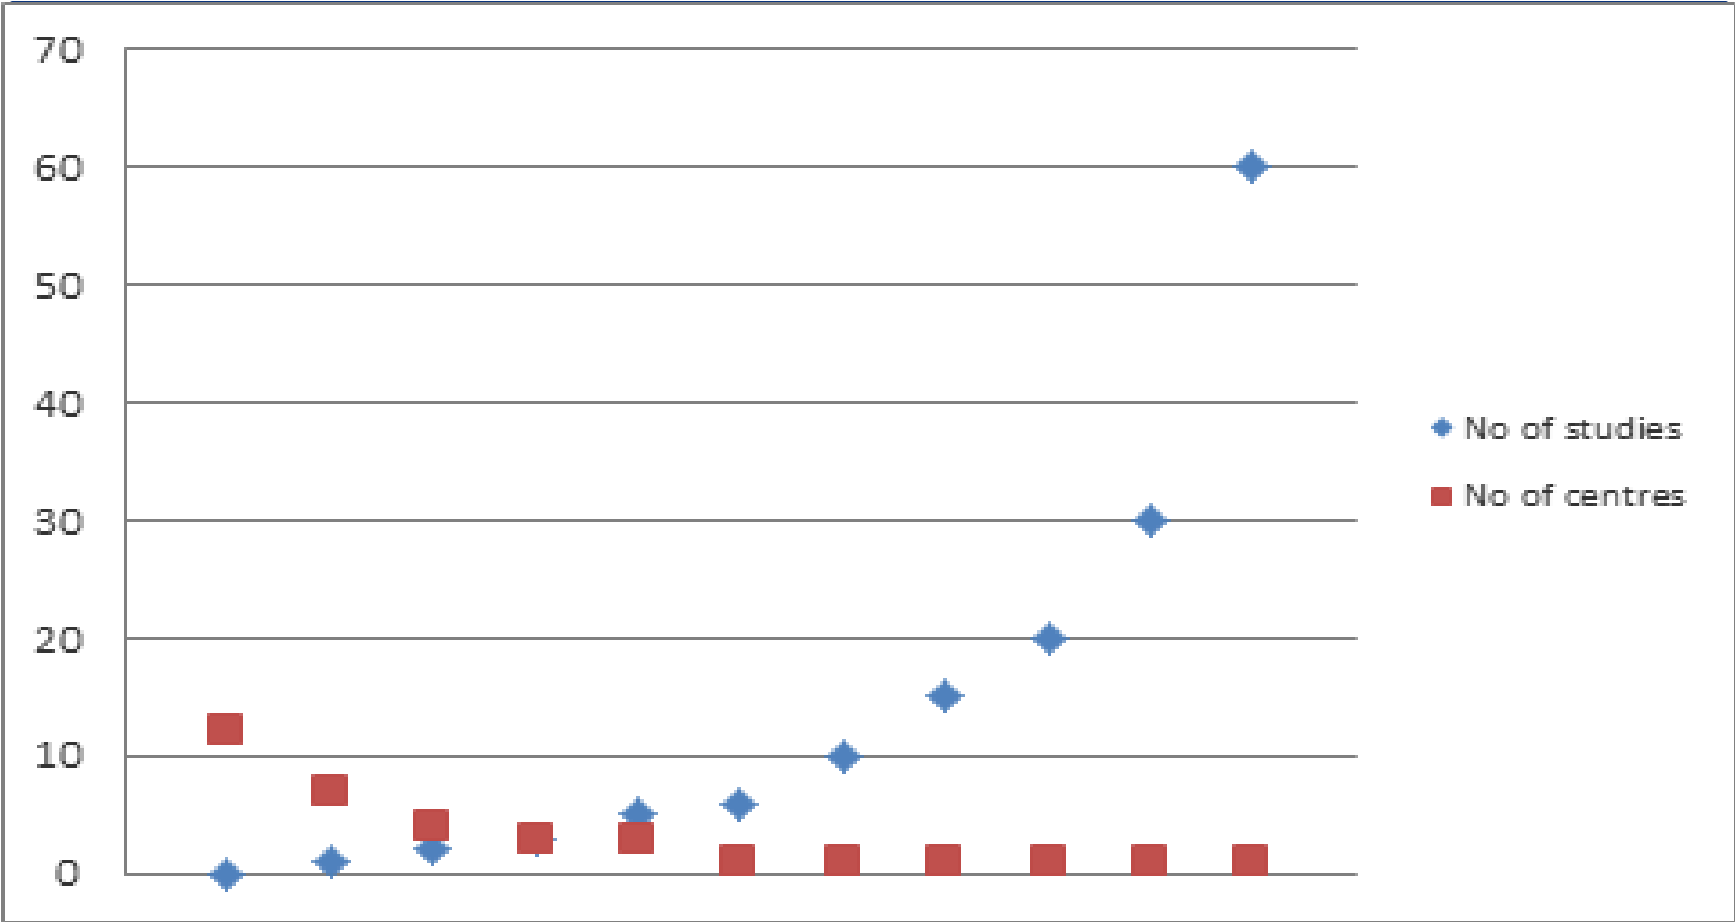

- ❑ HTA WG mandate includes capacity building for the conduct of post-authorisation studies (PAS) that in tandem meet the needs of regulators and HTA bodies
- ❑ The ENCePP-HTA WG survey was a collaborative exercise in mapping existing ENCePP experience in undertaking such studies
- ❑ The survey was designed to identify
 - ✓ Current experience within the network of including HTA outcomes in post authorization pharmacoepidemiological research
 - ✓ Potential areas for HTA skills enhancement
- ❑ 139 ENCePP centres were invited to complete an on line survey comprising 21 questions in 2Q 2014

PROFILE OF RESPONDING CENTRES (N = 35)

Responses from across the spectrum of ENCePP centres

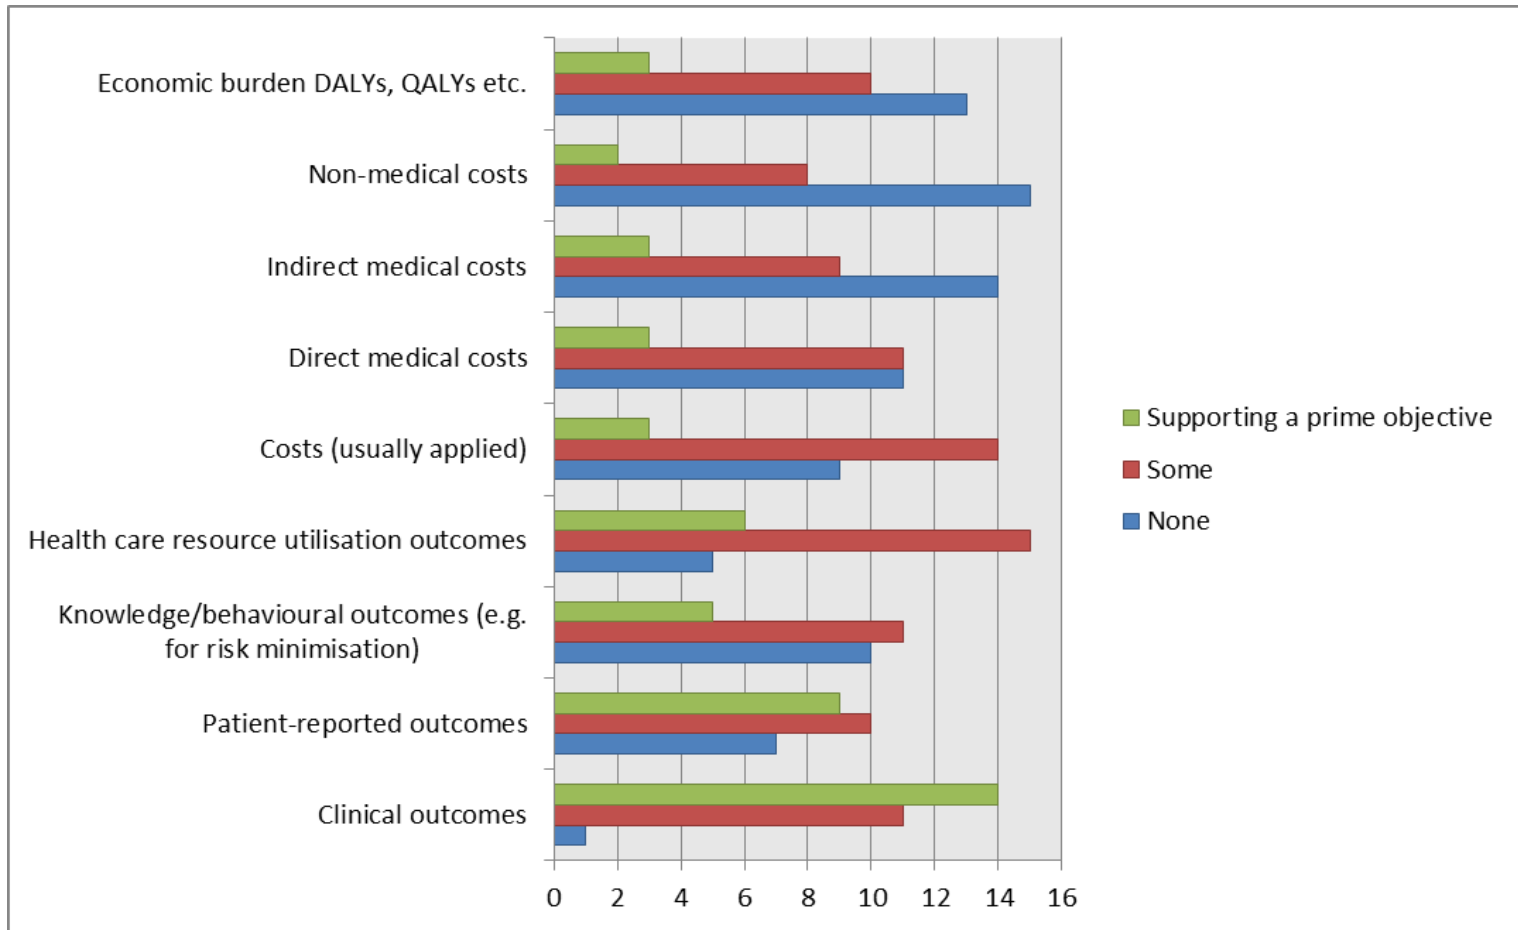

STUDIES PERFORMED WITH HTA OUTCOMES (N = 32)

A small number of centres performed a high proportion of studies

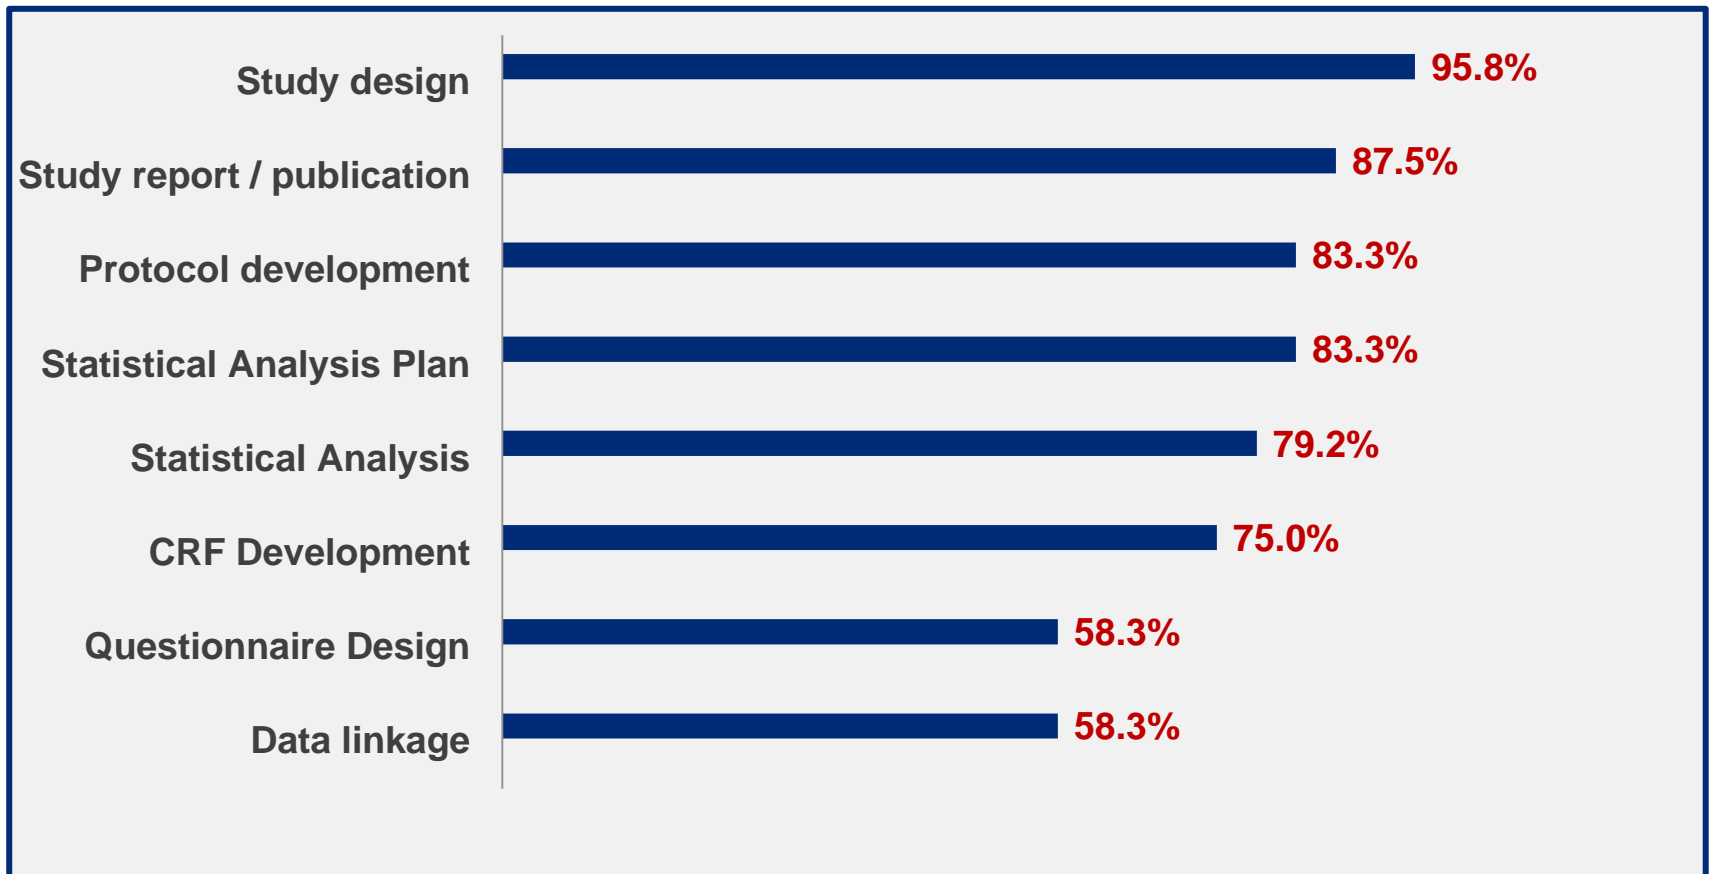

EFFECTIVENESS DATA COLLECTION (N = 26)

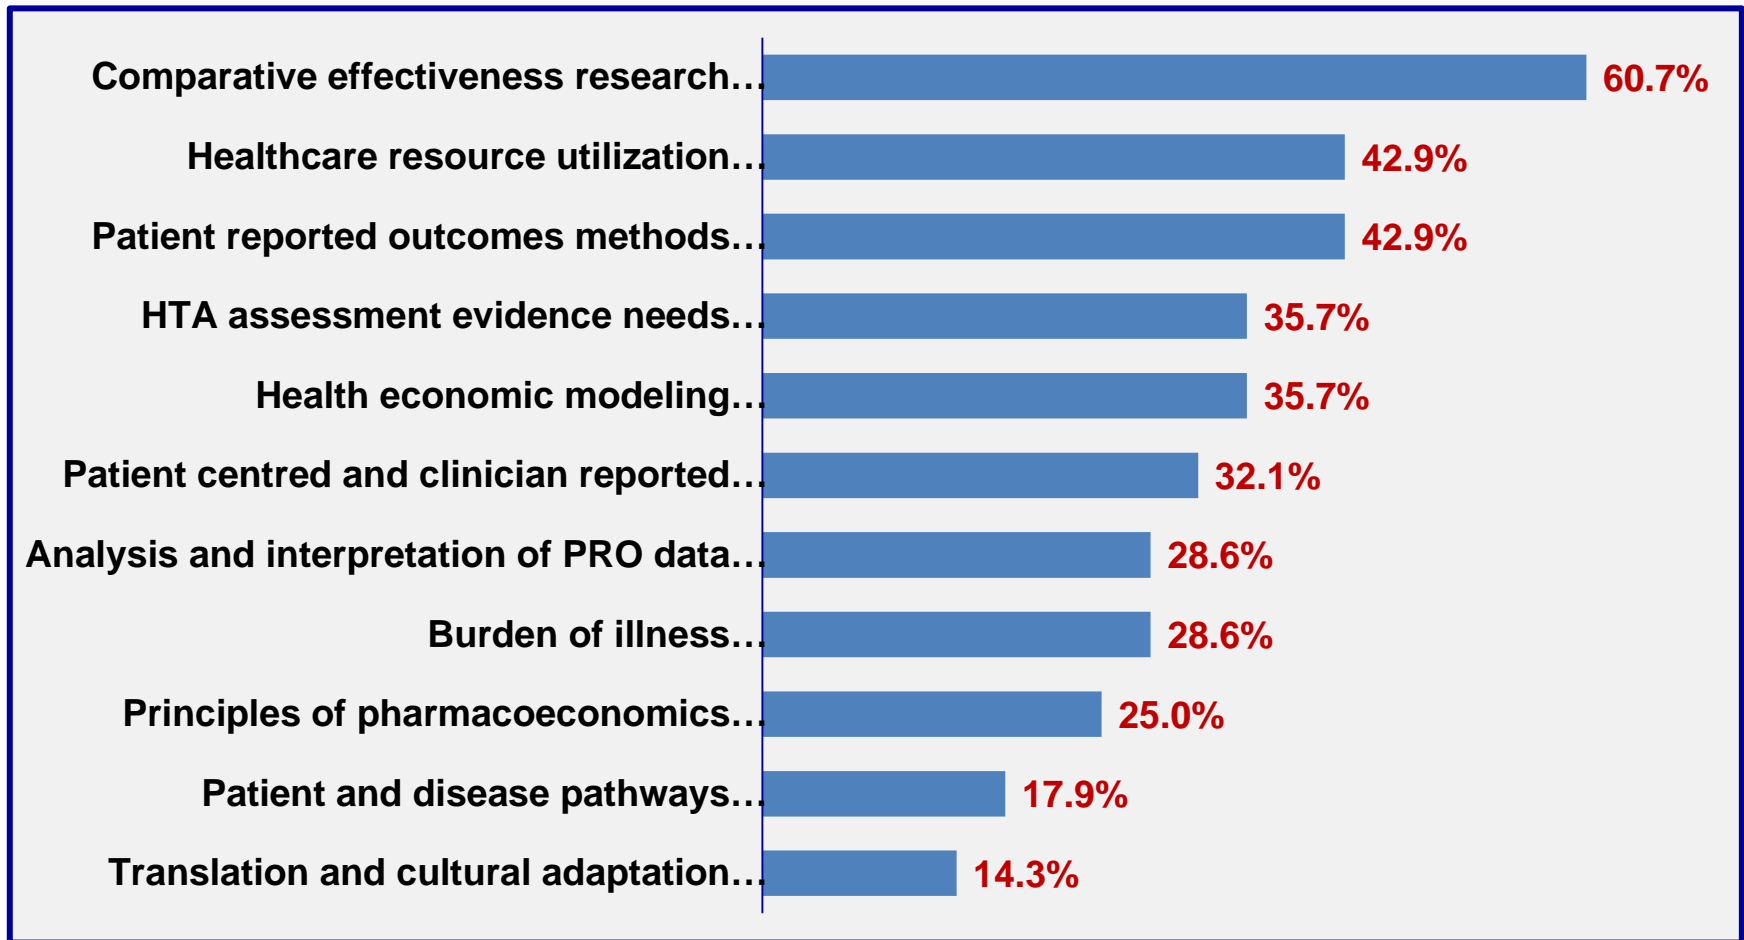

Experience mostly with clinical and patient-reported outcomes

STUDY INVOLVEMENT (N = 24)

Study involvement from design to reporting

SKILLS ENHANCEMENT NEEDS IDENTIFIED (N = 28)

Comparative effectiveness research most often identified

SUMMARY

Implications and actions arising from the survey need to be agreed by the working group however the results

- ❑ Confirm that an important proportion of ENCePP centres have experience in conducting studies with endpoints directly relevant to HTA
- ❑ Given the increasing interest in individual studies responding to both regulatory and HTA questions, ENCePP may be a useful platform to develop European capacity to deliver such studies.
- ❑ Indicate a level of experience which could support the development of a 'Good Practice' paper for conducting studies that include HTA and safety outcomes
- ❑ Provide an opportunity to assess if / how the ENCePP Research Resources Database might be updated to reflect individual centre competencies

PLANNED NEXT STEPS

- Results will be used to inform approaches on building capacity, including through training
- Building on the experience in conducting the survey – group has consolidated
- Enhance group membership with increased involvement of individuals from HTA bodies
- Increase awareness of ENCePP among HTA bodies
- The results have been disseminated through ISPE and ISPOR and will be presented at EMA-EUnetHTA meeting December 2014

Thank you to those who responded
